The project (2005-2009) investigated a three-phase approach to managing recruitment designed to:
- encourage seed set and delivery by desirable species;
- prepare more suitable micro-sites for seedling recruitment; and
- identify the better post-emergence tactics that aided seedling recruitment in the short to medium-term.

Data covers 5 experiments conducted at 3 field sites over the period 2006-2009.

**Online survey responses data:**

**Data collection:**

This data set collected in 2012 consists of online questionnaire responses from a study investigating research support services in 140 academic libraries in Australia, New Zealand, Ireland, and the United Kingdom. The focus was on bibliometric and research data support services current and planned, and investigated target audience, service enabling and constraints, and staff training needs.

---

**Constraints on service development**

- Percentage reporting constraints on bibliometric support services:
  - Australia (n=35)
  - New Zealand (n=8)
  - UK (n=88)
  - Ireland (n=9)
  - Total (n=140)

- Percentage reporting constraints on data management support:
  - Australia (n=35)
  - New Zealand (n=8)
  - UK (n=88)
  - Ireland (n=9)
  - Total (n=140)

---

**Services offered or planned**

- Percentage of libraries offering or planning bibliometric support services:
  - Australia (n=35)
  - New Zealand (n=8)
  - UK (n=88)
  - Ireland (n=9)
  - Total (n=140)

- Percentage of libraries offering or planning data management support:
  - Australia (n=35)
  - New Zealand (n=8)
  - UK (n=88)
  - Ireland (n=9)
  - Total (n=140)

---

**Research questions**

- Research questions related to bibliometric and research data management:
  - What specialist research support services are libraries offering and planning?
  - Are libraries constrained in providing specialist research support services?
  - Do staff require additional education and training for research support roles?
  - How might LIS schools respond to evolving library roles in research support?

**Venom, speed, and caution:**

**Effects on performance in a visual search task**

Dr Danielle Sulikowski

These data come from a study that investigated perceptual sensitivity to pictures of venemous creatures. It re-interpreted previous findings to resolve inconsistencies in the literature by replacing a theory of "differential disengagement of attention" (finding it difficult to look away from such images) with one of "differential caution" (taking longer to respond to the images to minimise the chance of making an error). The full study is described in the following publication: Sulikowski, D. (2012). Venom, speed, and caution: Effects on performance in a visual search task. Evolution and Human Behavior 33(4): pp. 365-377 (DOI: 10.1016/j.evolhumbehav.2011.11.007)
